Science Lesson-Spring Gardening

Everyone knows spring is the prime time to fill your garden with all types of flowers. Garden flowers fall under two main categories: perennial and annuals. As a rule, perennials bloom for a shorter time, but the plant returns year after year to bloom again. Annuals, on the other hand, will bloom continually throughout the year, but once the season is over, they die and won't return. Since both types have their appeal, many home gardens include both.

Since it is close to Mother's Day, your assignment is to draw four flowers: label two perennials and two annuals. If you need help identifying the flower please feel free to research, ask a family member, even your mother. Remember to wish your mother, "Happy Mother's Day".
